**Biology** is the study of *Life*. It helps us understand many things, such as how our body works, how our body keeps warm, and what we are made of. Biology is very important to know. Some subjects in Biology are Genetics, Zoology, Botany, and Ecology.

A Biologist is someone who studies Biology.

## 0.1 What is life?

Living things are different from things that are not alive. It is usually easy to tell what is living and what is not, except with really small "microscopic" life forms and colorless, lifeless-looking mosses.

Here are some properties of living things. Some non-living things can have some of these properties.

Living things can change and grow. However, volcanoes also change and grow.

Living things can move. However, the wind is moving air, and water always moves downhill.

You probably want to know how plants can move. They can grow, and sometimes move more rapidly than that, in response to things such as the sun or water. One example is that sunflowers will turn during the course of the day so that they are always facing the sun. Another example is that if a plant gets tipped over, it will want to turn upwards.

Living things can reproduce. That is they can produce copies of themselves, over and over. This is the most important difference between living and non-living things.

In order to reproduce, living things need nutrition, that is chemicals and energy sources in order to assemble the materials needed to reproduce themselves. In this process , living things must excrete waste. Waste is material which is of no use, or harmful.

Animals, bacteria, and plants are examples of living things. Rivers, mountains, oceans, and soil are examples of non-living things, but often they are homes for living things.

Cars and tables are not living things because they cannot reproduce themselves.

## 0.2 Levels of Life

Living things can be many sizes. Also, biologists organize the structures and groupings of living creatures according to size. A living creature is called an organism. Organisms can consist of single cells or multiple different types of cells grouped into tissues and organs. From small to large, these are how living things are grouped.

- Cells<sup>1</sup>

Most cells are only a few microns wide, so small they can only be seen with a microscope.

A micron is one thousandth of a millimeter.

- Tissues<sup>2</sup>

---

1 <http://en.wikibooks.org/wiki/%2FCells>

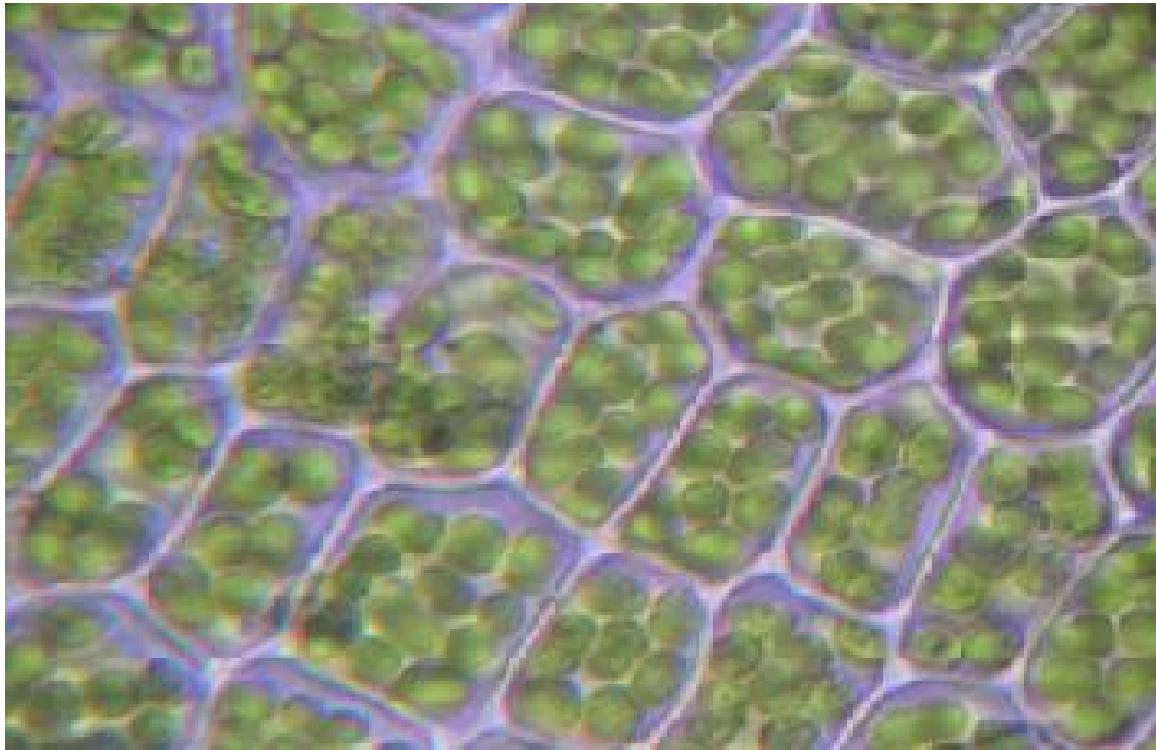

2 <http://en.wikibooks.org/wiki/%2FTissues>

- Organs<sup>3</sup>
- Organ systems<sup>4</sup>
- Organisms
- Populations
- Communities
- Ecosystems
- Biomes
- Biosphere

The biosphere is the whole network of living things on planet Earth --- eight thousand miles in diameter, twenty five thousand miles around the equator.

Each thing in the list is made up of the things above it. For example, communities are made of many populations and populations are made up of many organisms.

### 0.3 Cells

**Figure 1** Plant cells

All living things are made of cells. They are the components and building blocks of life.

3 <http://en.wikibooks.org/wiki/%2FOrgan>

4 <http://en.wikibooks.org/wiki/%2FSystems>

## 0.4 What is a cell?

A cell is a bag of liquid that holds in the stuff of life.

A **cell** is the smallest unit of living (things)organism. If you look at living things under a microscope, you will see that they are made of small squares or balls. **Robert Hooke**, a biologist from England, saw small squares in cork with a microscope. They looked like rooms. Small rooms are sometimes called *cells*, so he named them that.

## 0.5 What types of cells are there?

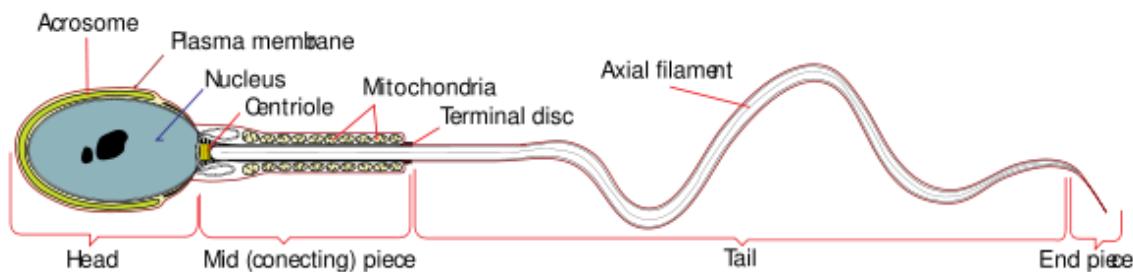

There are two kinds of cells: **eukaryotes**, which have a large ball in them called a *nucleus*, and **prokaryotes**, which do not.

Most prokaryotes are very small. Prokaryotes include just two **kingdoms**: **Bacteria** and **Archea**. All of the rest of the kingdoms are Eukaryotes: **Animals**, **Plants**, **Fungi**, and **Protists**.

## 0.6 What do cells look like?

Cells are surrounded by a thin oil layer called the *cell membrane*. It separates the inside of the cell from the outside. Some cells also have a firm box around them called a *cell wall* that keeps it from breaking. The water that fills a cell is called the *cytoplasm*. Inside a cell, knowledge is stored in a thing called a *chromosome*. It tells the cell how to work, like steps in a book.

Eukaryotic cells hold their chromosomes in a structure called a **nucleus**, which has its own oily membrane around it. Cells also have many other membrane-bound things called **organelles**, which means "little organs". Some organelles found in eukaryotic cells are called *ribosomes*, *vacuoles*, *mitochondria*, and *chloroplasts*.

**Figure 2** Human sperm cell

Cells that do different things have different shapes. A plant leaf cell takes light and uses it to make sugar. To do this, it has green organelles called *chloroplasts*. To get the most light it pushes cytoplasm in circles around a hollow bubble of water in the center of the cell called a *vacuole*.

A human sperm cell carries its chromosomes, found in the nucleus, to an egg cell in order to make a new baby. It has a large tail called a *flagella* that helps it to swim. It also has many organelles called *mitochondria* that give it power like gasoline gives power to a motor.

## Words

**nucleus** - A ball of membrane in the middle of the cell that holds the chromosomes.

**chromosomes** - Things that hold the knowledge of the cell.

**prokaryote** - A cell without a nucleus.

**eukaryote** - A cell with a nucleus.

**organelles** - Little things inside a cell.

**cytoplasm** - The gel-like inside of a cell.

**membrane** - An oil bag that holds water.

**vacuole** - An organelle full of water and waste inside a cell.

**mitochondria** - An organelle that makes power in a cell.

**chloroplast** - An organelle that makes sugar found in a plant or protist.

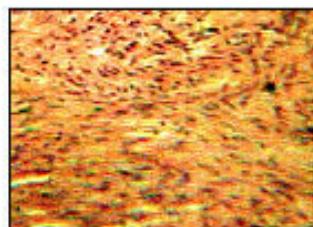

**flagella** - A tail on a cell that makes it swim.

**golgi body** - An organelle which helps in secretion.

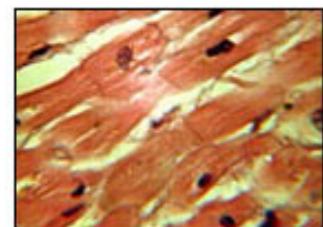

**ribosome** - An organelle which helps in synthesis of proteins.

Skeletal muscle

Smooth muscle

Cardiac muscle

**Figure 3** Animal muscle tissue

## 0.7 Tissues

Organisms are made of tissues. Tissues are groups of cells<sup>5</sup> that work together. Plant leaves have tissues that capture light and make sugar. Most animals have **muscle** tissues that help them move.

5 <http://en.wikibooks.org/wiki/%2FCells>

When two or more tissues work together to do one thing they make up organs<sup>6</sup>.

In plants, there are two types of tissues:

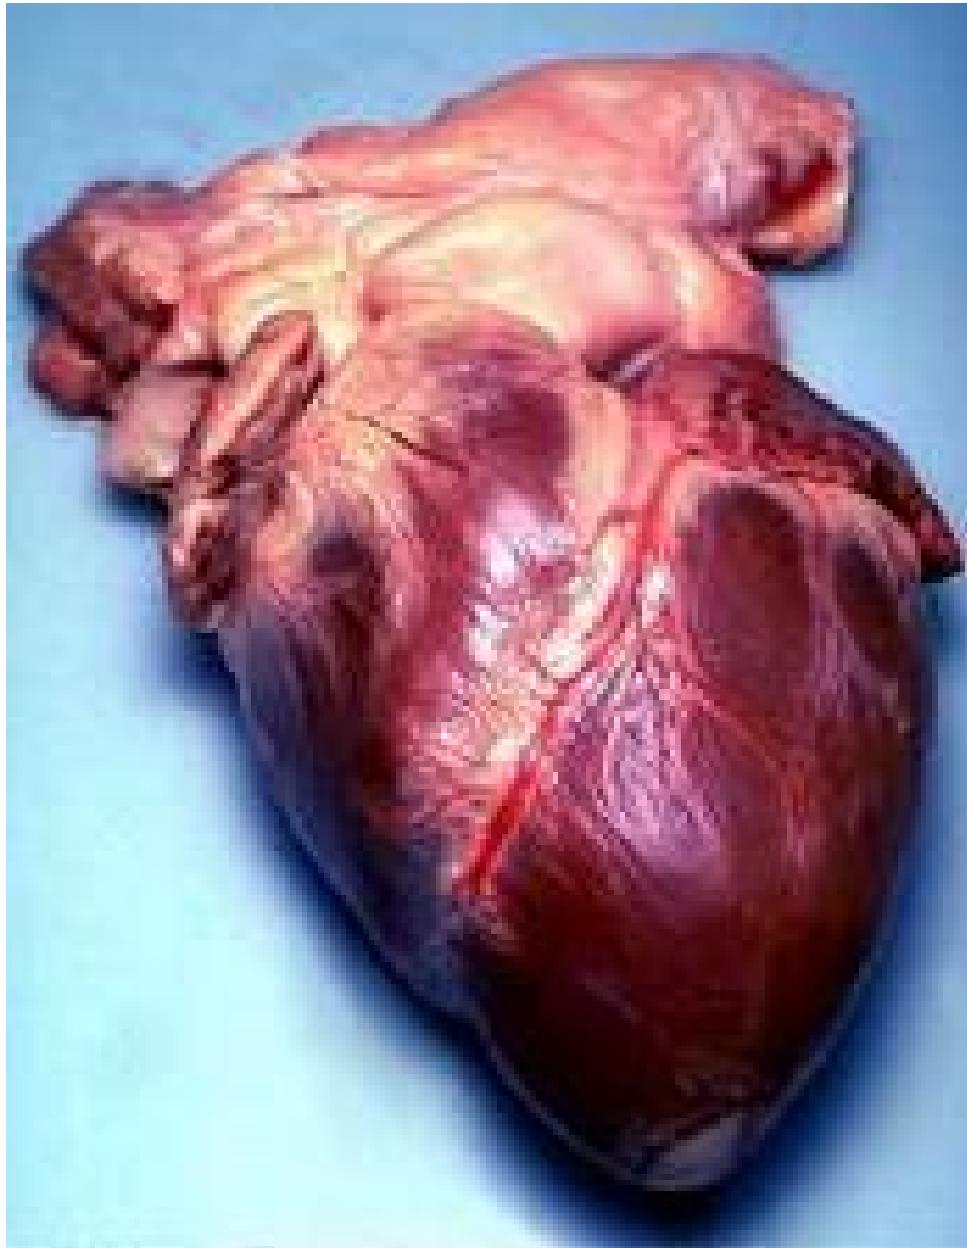

- **Meristematic tissue:** This has actively dividing cells.
- **Permanent tissue:** This type of tissue has developed cells. They do not divide.
  - **Simple permanent tissue:** This type of permanent tissue has only one kind of cells.
  - **Parenchyma:** They have loosely packed cells. The cells do not have a particular function.
  - **Collenchyma:** They have cells which have layers called pectin<sup>7</sup>. They contain chlorophyll.
  - **Sclerenchyma:** They have dead cells. Between the cells, there are layers called lignin.
- **Complex permanent tissue:** This type of tissue contains different kinds of cells.
  - **Xylem:** This type of tissue contains mainly dead cells. They help to move water from the roots to leaves.
  - **Phloem:** This type of tissue contains mainly living cells. They help moving food materials from leaves to other parts.

---

6 <http://en.wikibooks.org/wiki/%2F0rgans%20>

7 <http://en.wikipedia.org/wiki/pectin>

## 0.8 Organs

**Figure 4**

Many living things have **Organs**.

Your Heart, Brain, Lungs, Liver, and Kidneys are organs.

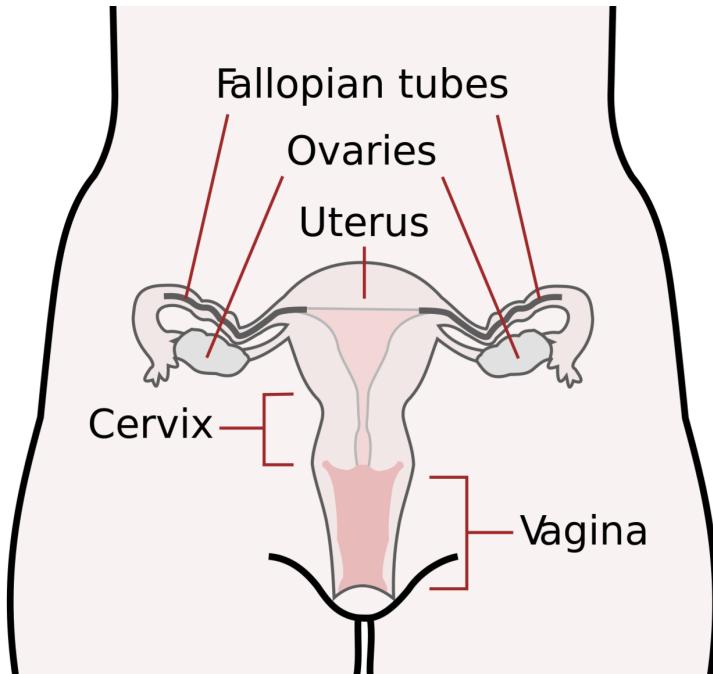

Organs are made of two or more tissues<sup>8</sup>.

Organs each have something that they do. The heart pumps blood. The lungs give you air.

<sup>8</sup> <http://en.wikibooks.org/wiki/%2FTissues%20>

Organs work together in groups called Organ systems<sup>9</sup>.

## 0.9 Organ systems

**Figure 5** Reproductive system in women

Two or more organs that work together make an **organ system**.

Organ systems are found in all different kinds of living things.

Some of the organ systems found in humans include:

- Circulatory System<sup>10</sup>
- Respiratory System<sup>11</sup>
- Digestive System<sup>12</sup>
- Endocrine System<sup>13</sup>
- Reproductive System<sup>14</sup>
- Urinary System<sup>15</sup>
- Immune System<sup>16</sup>
- Muscular System<sup>17</sup>

9 <http://en.wikibooks.org/wiki/%2FSystems>

10 <http://en.wikibooks.org/wiki/%2FSystems%2FCirculatory%20System>

11 <http://en.wikibooks.org/wiki/%2FSystems%2FRespiratory%20System>

12 <http://en.wikibooks.org/wiki/%2FSystems%2FDigestive%20System>

13 <http://en.wikibooks.org/wiki/%2FSystems%2FEndocrine%20System>

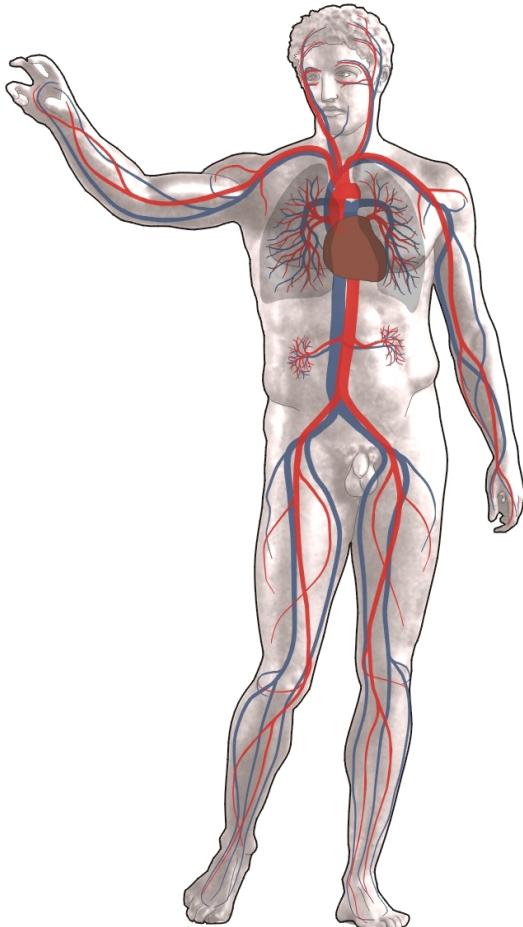

14 <http://en.wikibooks.org/wiki/%2FSystems%2FReproductive%20System>

15 <http://en.wikibooks.org/wiki/%2FSystems%2FUrinary%20System>

16 <http://en.wikibooks.org/wiki/%2FSystems%2FImmune%20System>

17 <http://en.wikibooks.org/wiki/%2FSystems%2FMuscular%20System>

- Skeletal System<sup>18</sup>
- Integumentary System<sup>19</sup>
- Nervous System<sup>20</sup>

**Figure 6** The Circulatory System

## 0.10 The Circulatory System

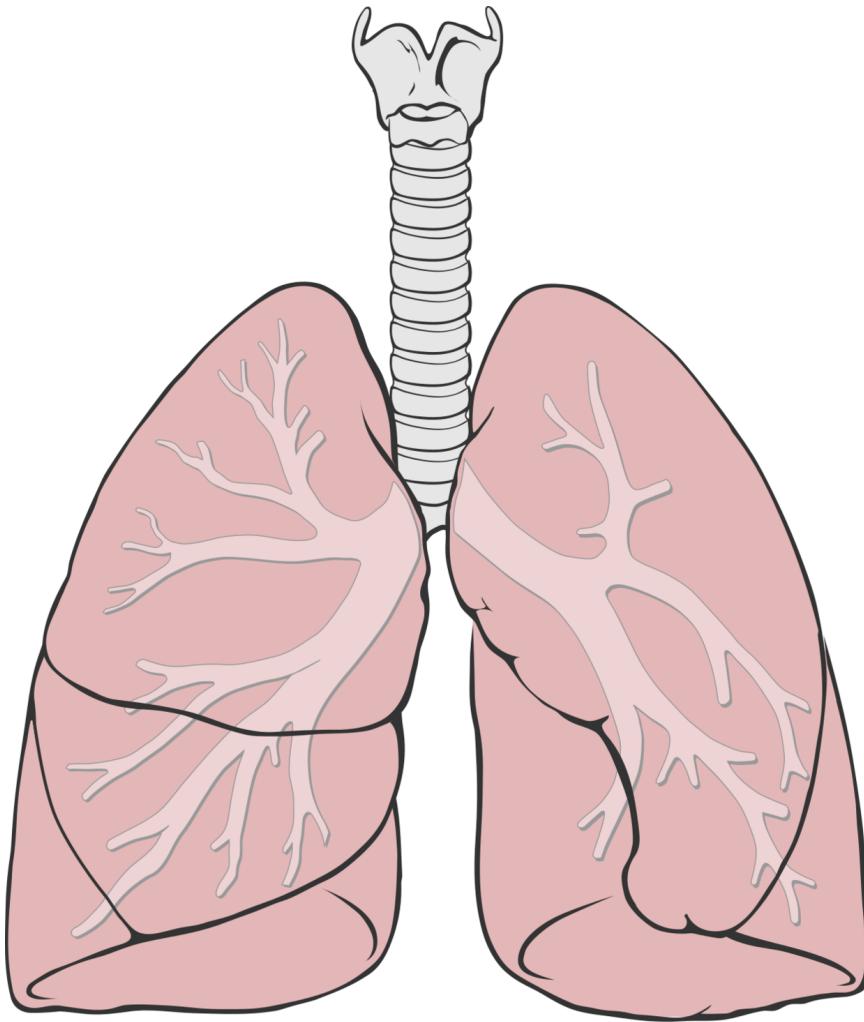

The **Circulatory System** moves blood around your body. This blood carries food and *oxygen* around to all of the cells of the body. It also carries signals called **hormones** that help the body work together.

The major organ of the circulatory system is the **heart**, which pumps the blood. Blood goes away from the heart in tubes called **arteries** and comes back to the heart in tubes called **veins**. The smallest tubes are called **capillaries**.

18 <http://en.wikibooks.org/wiki/%2FSystems%2FSkeletal%20System>

19 <http://en.wikibooks.org/wiki/%2FSystems%2FIntegumentary%20System>

20 <http://en.wikibooks.org/wiki/%2FSystems%2FNervous%20System>

**Figure 7** Lungs

## 0.11 The Respiratory System

The **Respiratory System** is how air gets into our bodies. We breathe in and out with our **lungs**. The air we breathe in has something called *oxygen* that our cells need. Cells make *carbon dioxide* which can poison our bodies. Our lungs push this out of our bodies.

The respiratory system works together with the circulatory system<sup>21</sup> to make sure that air gets to each cell of the body.

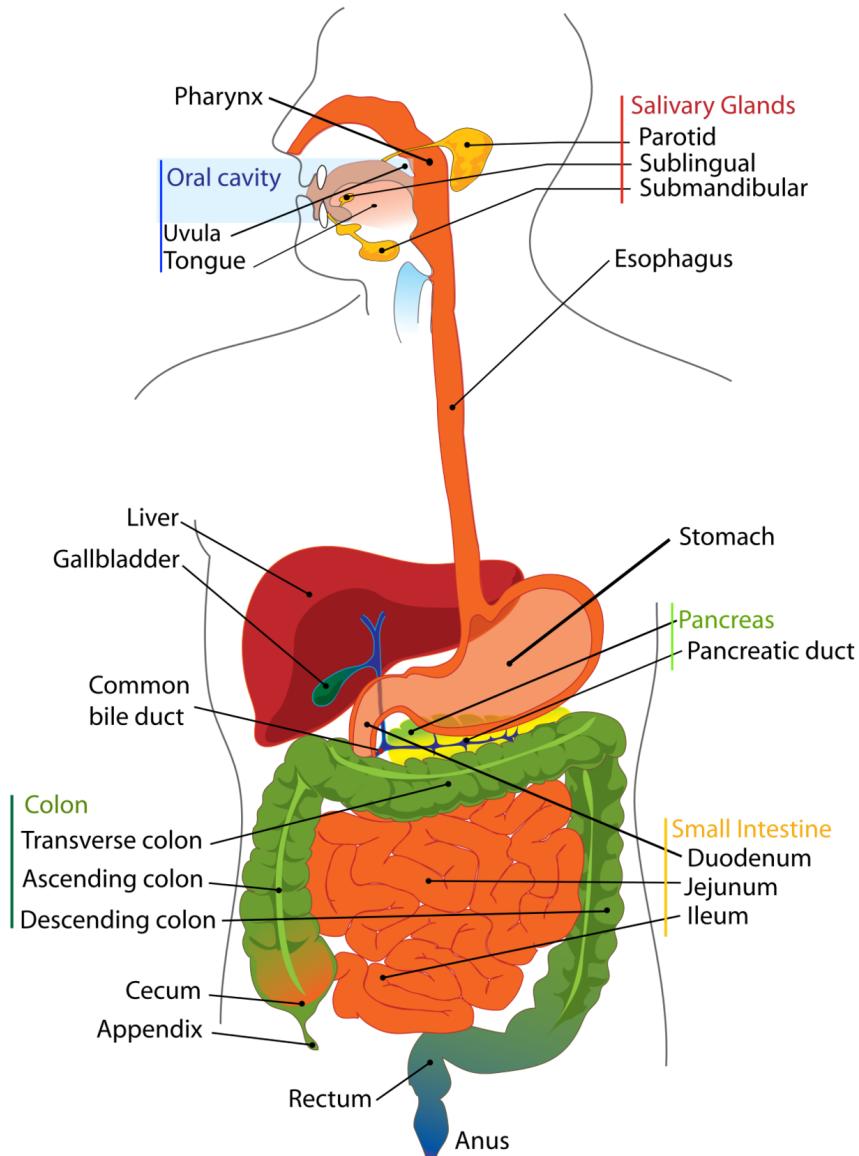

Parts of the respiratory system are the nose, pharynx, larynx, trachea, bronchi, bronchioles, and alveoli.

- Air comes in through the nose and mouth.

---

<sup>21</sup> Chapter 0.9 on page 9

- Dust is removed by the hair in the nose.
- Air goes through the pharynx (in the back of the mouth), the larynx or the voice box, and down the trachea (windpipe).
- The trachea splits into two major bronchi, one for each lung.
- This further splits into smaller bronchi, then into smaller tubes called *bronchioles* which lead into the air sacs called *alveoli*.
- This is where the oxygen goes into the blood and carbon dioxide comes out.

**Figure 8** Digestive system

## 0.12 The Digestive System

The **digestive system** is what a human uses to eat. Food comes in through our *mouth* is broken down in our *stomach* and our body takes the food in through the *intestines*. Then the waste goes out through the *anus*.

The digestive system is made of many organs. Here are some of the organs and their functions:

**Oesophagus** - Pushes food down into the stomach.

**Stomach** - Breaks down complex sugar by acid.

**Liver** - Makes a thing called *bile* that breaks down fat.

**Gall bladder** - Stores the bile and adds it when it is needed.

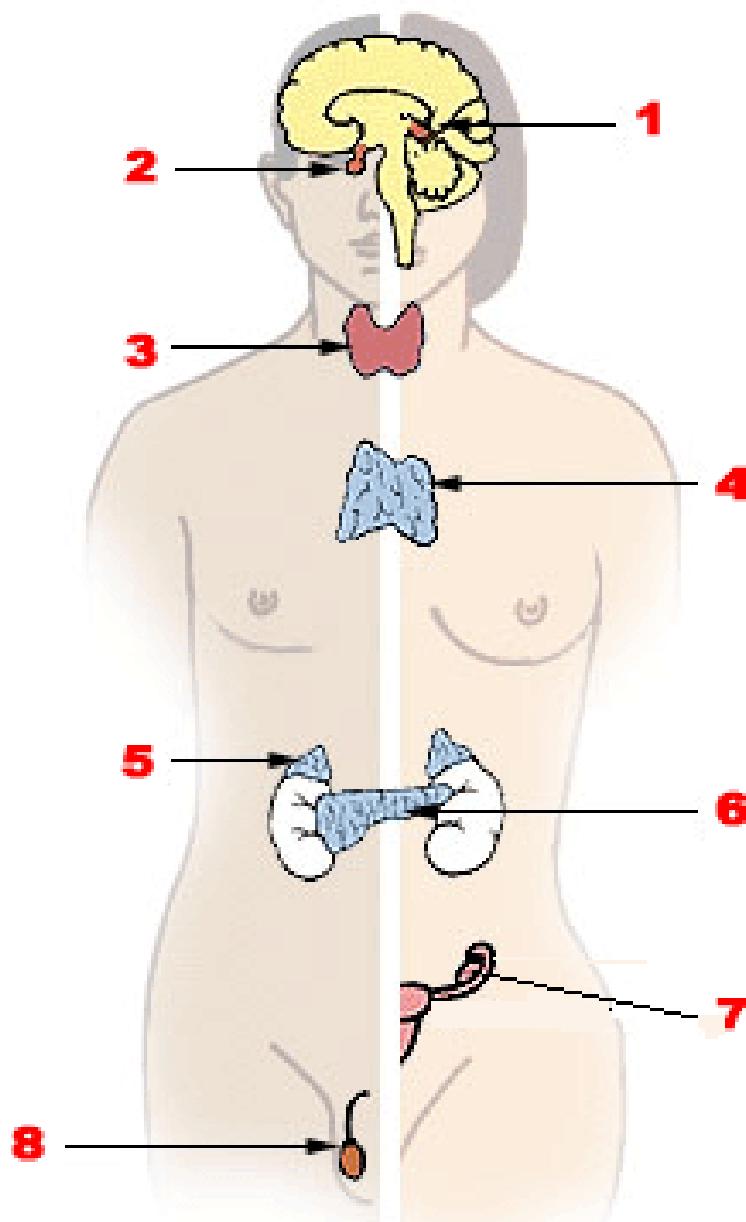

**Pancreas** - Makes chemicals that break down food.

**Small intestine** - Absorbs food for body.

**Large intestine** - Absorbs water and salt.

**Rectum** - Stores waste.

**Appendix** - Vestigial organ(has no function in human body).

**Figure 9**

### 0.13 The Endocrine System

The human body is made of many, many cells. To make the cells work together, the body sends signals through the blood called *hormones* that tell the cells in the body what to do.

The **Endocrine System** is the organ system<sup>22</sup> made of the organs that make hormones.

<sup>22</sup> Chapter 0.8 on page 8

The endocrine system organs:

1. Pineal gland
2. Pituitary gland
3. Thyroid gland
4. Thymus
5. Adrenal gland
6. Pancreas
7. Ovary
8. Testis

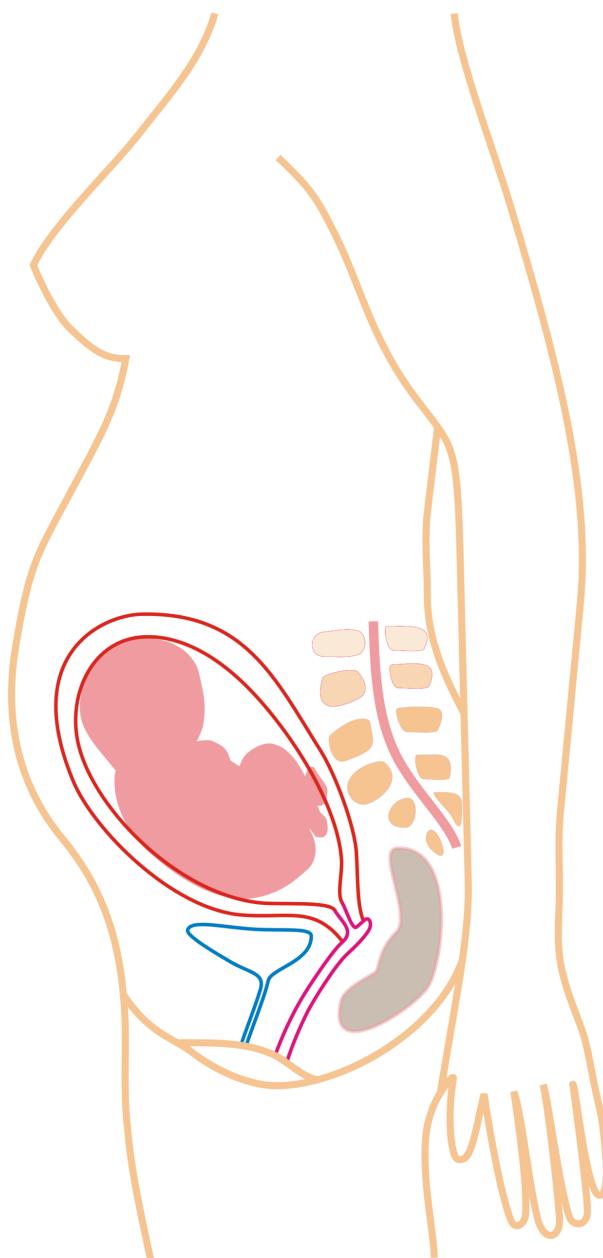

## 0.14 How are babies made?

In humans there are two sexes: *Men* and *Women*. Babies are made when cells<sup>23</sup> called *sperm* (produced by men) get together with cells called *eggs* (produced by women) in a process called **fertilization**. When the cells combine, they form a new cell, called a **zygote** (*zy* rhymes with *eye*; *gote* sounds like *goat*) which has all it needs to make a new man or woman. The zygote will make a baby like his mother and father.

---

23 Chapter 0.2 on page 3

## 0.15 Where do babies come from?

**Figure 10** A baby grows in its mother.

Babies come from their mother. To make a baby, the father must put his sperm into the mother's body. This is called *having sex*. The man puts his *penis* into the woman's *vagina* and the sperm cells swim into the mother's body. Fertilization happens in the mother. The new zygote grows into a ball which will stick to the mother's **womb**. This ball grows into a baby.

Nine months later (266 days after fertilization) a new baby will come out of the mother's vagina in a process called **birth**.

## Words

**cell** - Things that are alive are made of little boxes called cells.

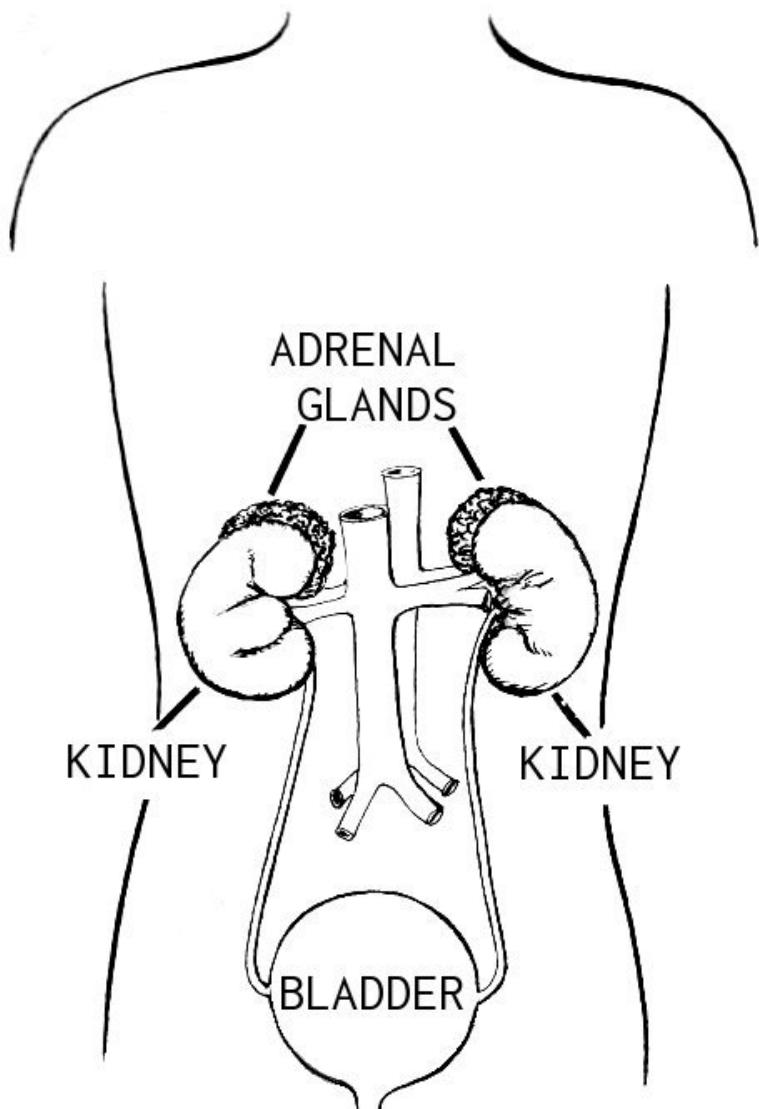

**womb** - The place in a body where a baby grows.

**zygote** - The one cell made from a sperm cell and an egg cell that will grow into a person.

**sperm** - A sex cell made by a man.

**egg** - A sex cell made by a woman.

**fertilization** - When sperm and egg get together and make a zygote.

**Figure 11** Urinary System

## 0.16 The Urinary System

The **Urinary system** takes bad things out of the blood and washes it out of the body. This liquid waste is called **urine**. Without the urinary system, poisons would fill up the blood and kill a person. The **kidneys** are organs<sup>24</sup> that filter the blood and remove poison. Urine is stored in a bag called the **bladder** and it leaves the body through a tube called the **urethra**.

## 0.17 Immune System

**Figure 12** A disease, that our Immune System tries to fight against.

---

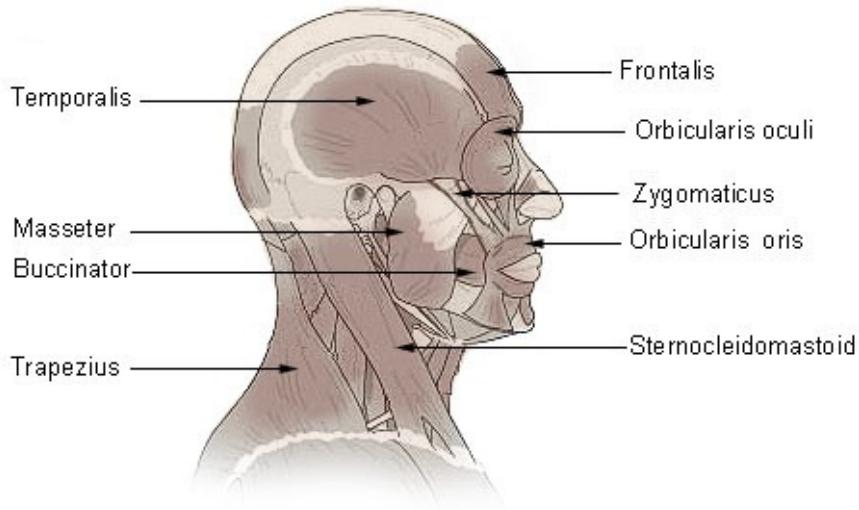

<sup>24</sup> Chapter 0.7 on page 6

The **immune system** protects our bodies from disease. Cells called *white blood cells* found in our blood are able to kill bad things such as bacteria<sup>25</sup> and viruses<sup>26</sup>.

There are many different types of white blood cells. Some of them make things called **antibodies** that stick to things that enter our bodies making them easy to find. Other white blood cells get rid of bacteria and stop viruses like the flu.

When our immune system does not work well, we are vulnerable to disease caused by bacteria<sup>27</sup> and viruses<sup>28</sup>. Problems with the immune system include **allergies**; in allergies, white blood cells attack things that are not bad, like pollen in our eyes or cat dander. **AIDS (Acquired Immunodeficiency Syndrome)** is a disease caused by a virus that kills some white blood cells, leaving our bodies vulnerable to bacteria or viruses.

## 0.18 Muscular system

**Figure 13**

The *muscles* of the body are what make the body move. They are made of muscle tissues<sup>29</sup>.

All of the muscles of the body together make up the **muscular system**.

Signals from the nervous system<sup>30</sup> tell the muscles when to move. The muscles are attached to the skeleton<sup>31</sup> which holds them up.

---

25 <http://en.wikibooks.org/wiki/%2FKingdoms%2FBacteria>

26 <http://en.wikibooks.org/wiki/%2FViruses>

27 <http://en.wikibooks.org/wiki/%2FKingdoms%2FBacteria>

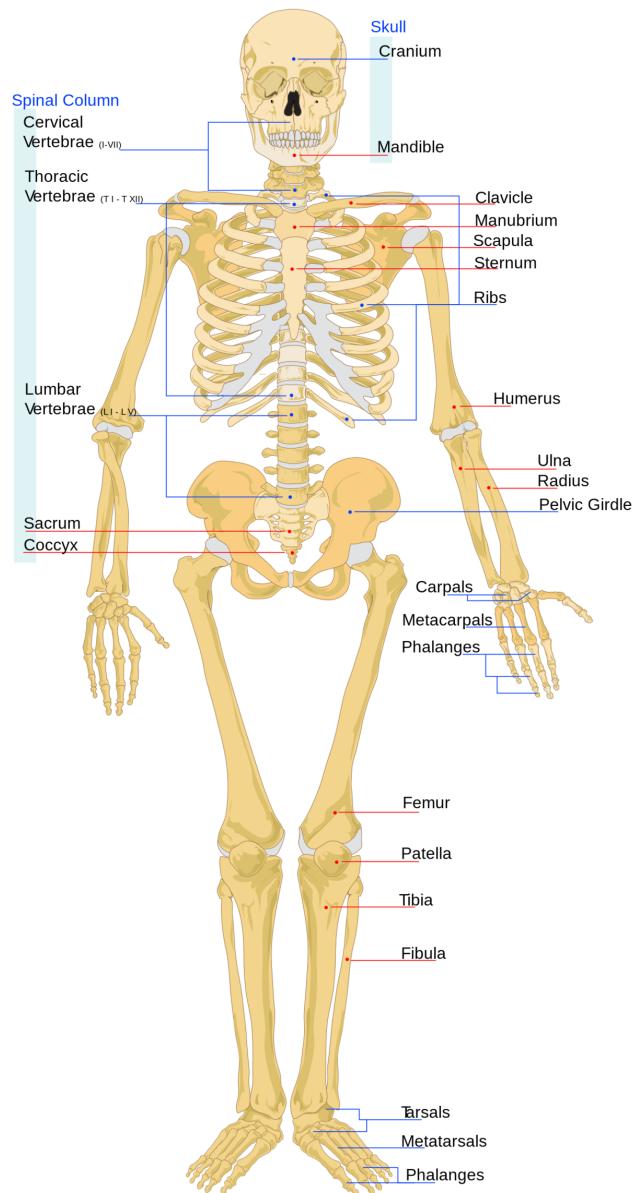

28 <http://en.wikibooks.org/wiki/%2FViruses>

29 <http://en.wikibooks.org/wiki/%2FTissues>

30 Chapter 0.21.1 on page 22

31 Chapter 0.18 on page 18

## 0.19 The Skeletal System

**Figure 14** The human skeleton.

The **Skeletal System** is made of all of the bones in the body. It protects the reproductive organs<sup>32</sup> and is a place for muscles<sup>33</sup> to attach. Bones are a very important part of the human body. Without them, we would simply collapse, and be very unstable. They support all of our tissue and muscles, and they are very difficult to break.

32 Chapter 0.13 on page 14

33 Chapter 0.17 on page 18

The inside of the bones is called the *bone marrow*. This is where most blood cells<sup>34</sup> are made.

**Figure 15** Skin

## 0.20 The Integumentary System

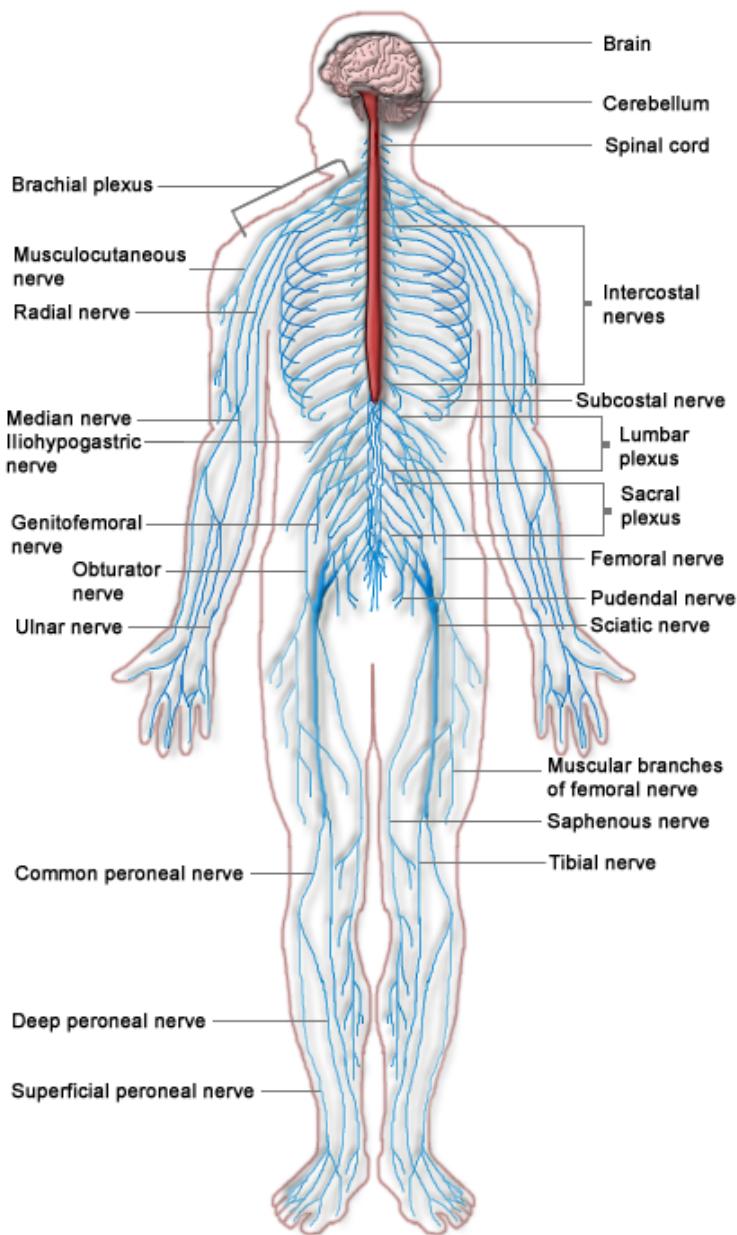

The **Integumentary System** is the system of the body made up of the skin, the nails, and the hair.

Skin keeps you cool by sweating. It also protects you by keeping things out of your body. The hair on your body keeps you warm. Skin also holds nerves<sup>35</sup> that we use to touch and hold and kiss. Your nails help you pick up things. The skin is the largest organ of the human body.

---

34 Chapter 0.9 on page 9

35 Chapter 0.20 on page 20

**Figure 16** The nervous system

## 0.21 The Nervous System

The *nervous system* helps you sense the world around you. It includes the *brain* and the *nerves* as well as the *senses*.

The nervous system can sense changes inside and outside the body through specialized cells called *receptors*. This information, in the form of small electric currents, is analyzed and responses are generated in the nervous system. These responses, again in the form of small

electric currents, are conveyed to the appropriate organs such as muscles or glands, at a great speed.

### 0.21.1 The Senses

Your five senses are: *smell* (with your nose), *taste* (with your tongue), *touch* (with your fingers, and so on), *sight* (with your eyes), and *hearing* (with your ears).

**Figure 17** A child's nose

If human beings couldn't smell, they wouldn't know if their food had a bad odor. If they couldn't taste either, they might like to eat everything, or, also bad in a different way, they might not like to eat anything. If they couldn't see, it would be harder for them to find their way around and avoid danger. And if they couldn't hear, they could not communicate with each other as easily.

## 0.22 Kingdoms

When we look at living things we divide them up into groups and give the groups names. This is called **classification**.

Living things are classified into groups of different sizes. The biggest groups contain almost everything. The smallest groups have only a few types of living things in them.

The groups are, from large to small:

Domain

Kingdom

Phylum

Class

Order

Family

Genus

Species

The domains are *Bacteria*, *Archaea*, and *Eukarya*, but most people still find it easiest to divide things by **kingdom**.

The six kingdoms are:

Archaea<sup>36</sup>

Bacteria<sup>37</sup>

Animalia (Animals)<sup>38</sup>

Plantae (Plants)<sup>39</sup>

Fungi (Funguses and mushrooms)<sup>40</sup>

Protista (Protists and Algae)<sup>41</sup>

## 0.23 Archea

**Figure 18** Colorful archaea

---

36 <http://en.wikibooks.org/wiki/%2FKingdoms%2FArchaea>

37 <http://en.wikibooks.org/wiki/%2FKingdoms%2FBacteria>

38 <http://en.wikibooks.org/wiki/%2FKingdoms%2FAnimals>

39 <http://en.wikibooks.org/wiki/%2FKingdoms%2FPlants>

40 <http://en.wikibooks.org/wiki/%2FKingdoms%2FFungi>

41 <http://en.wikibooks.org/wiki/%2FKingdoms%2FProtists>

Archea are creatures made up of single cells. They have been on Earth for a long, long time. Their name means old.

Archea have no nucleus in their single cell. They were once called bacteria, but they were taken out of the kingdom bacteria<sup>42</sup> because they are so different.

## 0.24 Bacteria

**Bacteria** are single celled creatures with no nucleus. They are very, very small. They grow all over the Earth, in the ground, in the water, and even in our bodies.

Some bacteria can cause diseases, but most do good things like break down waste and make *oxygen*.

Image:Bacteriarazorback.jpg<sup>43</sup>

## 0.25 Protists

**Figure 19** protists

---

42 <http://en.wikibooks.org/wiki/%2FKingdoms%2FBacteria>

43 <http://en.wikibooks.org/wiki/%20Image%3ABacteriarazorback.jpg>

Most **protists** are made of single cells. They are bigger than archaea<sup>44</sup> and bacteria<sup>45</sup>, and protist cells have a nucleus.

There are many different kinds of protist cells. Most live in the water, but some live in the soil or in animals. Some protists can cause diseases.

Green Algae is in the kingdom Protista. These can be small single cells or very large with many cells. *Sea weed* is algae and is in the kingdom Protista.

**Figure 20** Shiitake mushroom

## 0.26 Fungi

**Fungi** are mostly made of many cells. Fungi made of single cells are called *yeasts*. They are also part of a group of living things called 'Eukaryotes', just like animals and plants. We're closer to mushrooms and yeasts than you think!

Lots of people, when they see fungi, think of mushrooms, however there are lots of different types of fungi, not just mushrooms and toadstools.

Fungi are very important because they break down waste. The leaves on the bottom of a forest would get higher and higher if fungi were not there to eat it.

Fungi are also important producers of food for humans. Also, yeasts are used to make wine, beer, and bread. Some fungi are bad for our food, however, such as mould.

44 <http://en.wikibooks.org/wiki/%2FKingdoms%2FArchaea>  
45 <http://en.wikibooks.org/wiki/%2FKingdoms%2FBacteria>

**Figure 21** Banana plant

## 0.27 Plants

Plants are made of many cells<sup>46</sup>. Plants are usually green. Plants make their food from the sun. They use the light, carbon dioxide, and water to make glucose (sugar). Animals, fungi, some bacteria, and some protists eat plants for food.

Plants make *oxygen* which humans breathe, and they take in *carbon-dioxide* which humans exhale (that is, breathe out). Plants make their food from the sun by *photosynthesis*. They also provide shade. We make our houses from plants and make clothes from plants. Most foods that we eat are plants. Without plants, animals could not survive.

---

46 <http://en.wikibooks.org/wiki/%2FCells>

## 0.28 What is photosynthesis?

Photosynthesis is making sugar using the energy of light.

### 0.28.1 Why are plants green?

Plants are green because they have green Chloroplasts.

But why are Chloroplasts green? Chloroplasts are green because they contain the green pigment *chlorophyll* in their thylakoid membranes. Chlorophyll is a pigment that absorbs red and blue light.

**Figure 22** Ocelot, a cat

## 0.29 Animals

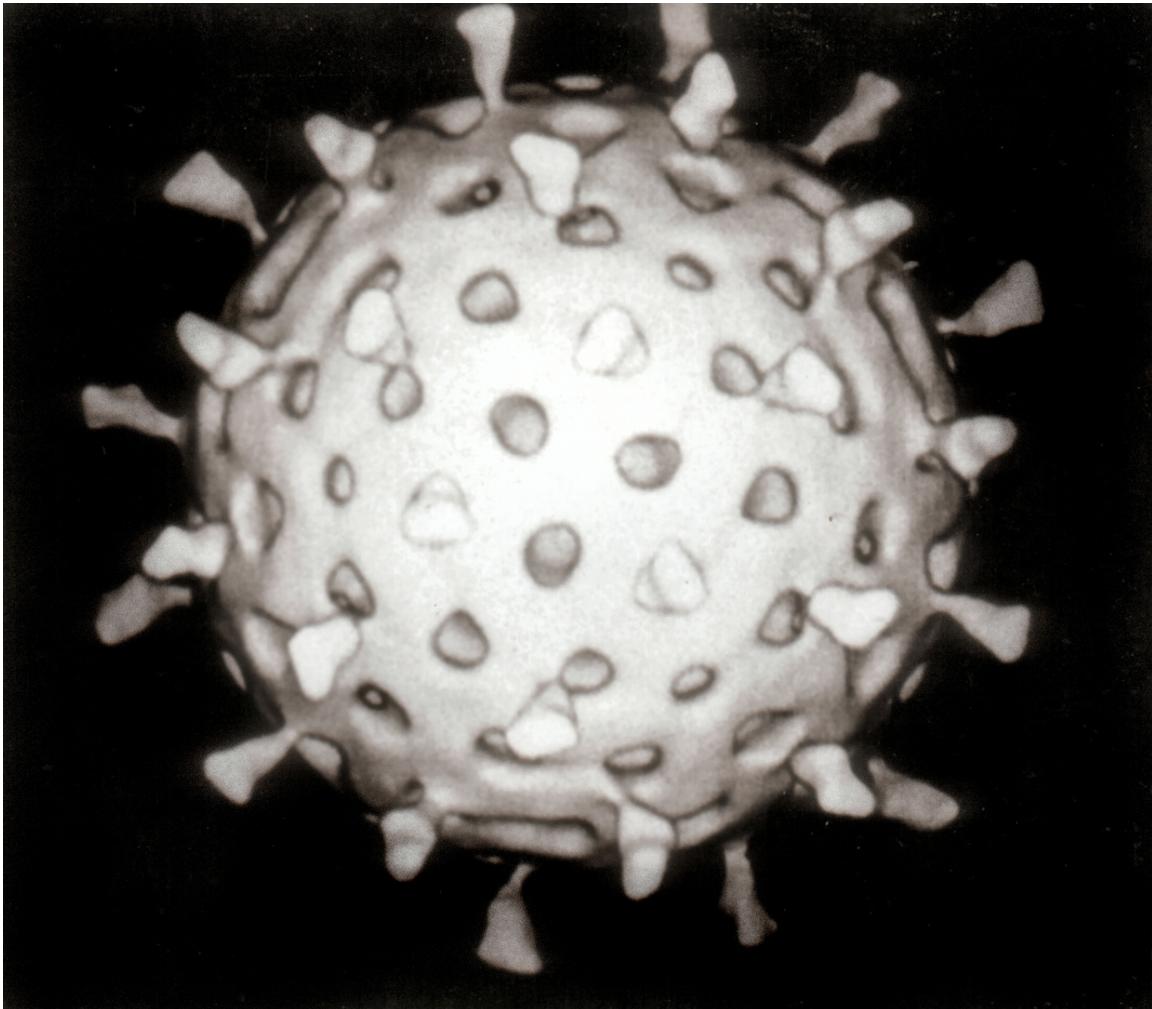

Animals are made of many cells. They eat things and digest them inside. Most animals can move. Only animals have brains (though not even all animals do; jellyfish, for example, do not have brains).

Animals are found all over the earth. They dig in the ground, swim in the oceans, and fly in the sky.

Humans are a type of animal. So are dogs, cats, cows, horses, frogs, fish, and so on and on.

Animals can be divided into two main groups, vertebrates and invertebrates. Vertebrates can be further divided into mammals, fish, birds, reptiles, and amphibians. Invertebrates can be divided into arthropods (like insects, spiders, and crabs), mollusks, sponges, several different kinds of worms, jellyfish --- and quite a few other subgroups. There are at least thirty kinds of invertebrates, compared to the five kinds of vertebrates.

## 0.30 Viruses

**Figure 23** A virus called a rotavirus, which can cause diarrhoea.

Viruses are much smaller than other living things like bacteria<sup>47</sup>, so small that it would take around one hundred viruses laid end to end just to make the length of a bacterium! Viruses are not really alive. They do not do all of the things that living things do<sup>48</sup>. They can only make more copies of themselves when they are inside living cells.

Viruses often kill cells<sup>49</sup>, and also make you ill. Lots of diseases are caused by viruses, the most famous ones being the flu and many colds.

---

47 <http://en.wikibooks.org/wiki/%2FKingdoms%2FBacteria>

48 <http://en.wikibooks.org/wiki/%2FIntroduction%23What%20is%20life%3F>

49 <http://en.wikibooks.org/wiki/%2FCells>

### 0.31 The End

**Figure 24** The Earth is the home of life

Biology is the study of Life. Life is all around us.

It is good to learn about living things.

Know Life and know the world!

Know Life and know yourself!

# 2 Licenses

## 2.1 GNU GENERAL PUBLIC LICENSE

Version 3, 29 June 2007

Copyright © 2007 Free Software Foundation, Inc. <<http://fsf.org/>>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed. Preamble

The GNU General Public License is a free, copyleft license for software and other kinds of works.

The licenses for most software and other practical works are designed to take away your freedom to share and change the works. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change all versions of a program—to make sure it remains free software for all its users. We, the Free Software Foundation, use the GNU General Public License for most of our software; it applies also to any other work released this way by its authors. You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for them if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs, and that you know you can do these things.

To protect your rights, we need to prevent others from denying you these rights or asking you to surrender the rights. Therefore, you have certain responsibilities if you distribute copies of the software, or if you modify it: responsibilities to respect the freedom of others.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must pass on to the recipients the same freedoms that you received. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

Developers that use the GNU GPL protect your work with two steps: (1) assert copyright on the software, and (2) offer you this License giving you legal permission to copy, distribute and/or modify it.

For the developers' and authors' protection, the GPL clearly explains that there is no warranty for this free software. For both users' and authors' sake, the GPL requires that modified versions be marked as changed, so that their problems will not be attributed erroneously to authors of previous versions.

Some devices are designed to deny users access to install or run modified versions of the software inside them, although the manufacturer can do so. This is fundamentally incompatible with the aim of protecting users' freedom to change the software. The systematic pattern of such abuse occurs in the area of products for individuals to use, which is precisely where it is most unacceptable. Therefore, we have designed this version of the GPL to prohibit the practice for those products. If such problems arise substantially in other domains, we stand ready to extend this provision to those domains in future versions of the GPL, as needed to protect the freedom of users.

Finally, every program is threatened constantly by software patents. States should not allow patents to restrict development and use of software on general-purpose computers, but in those that do, we wish to avoid the special danger that patents applied to a free program could make it effectively proprietary. To prevent this, the GPL assures that patents cannot be used to render the program non-free.

The precise terms and conditions for copying, distribution and modification follow. TERMS AND CONDITIONS S. Definitions.

"This License" refers to version 3 of the GNU General Public License.

"Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrighted work licensed under this License. Each licensee is addressed as "you". "Licenses" and "recipients" may be individuals or organizations.

To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (of or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu or prominent item in the list menu, this criterion. 1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable the use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as to intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work. 2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not conveg, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary. 3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying. 7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

\* a) Declining warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or \* b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or \* c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or \* d) Limiting the use for publicity purposes of names of licensors or authors of the material; or \* e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or \* f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, that restriction need not be applied to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way. 8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates

different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements. \* e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a Use Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying. 7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

\* a) Declining warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or \* b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or \* c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or \* d) Limiting the use for publicity purposes of names of licensors or authors of the material; or \* e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or \* f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, that restriction need not be applied to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way. 8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates

your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the rights of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10. 9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so. 10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it. 11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version. It do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey or propagate by procuring conveyance of, a covered work and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law. 12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, if you cannot excuse your work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy

both those terms and this License would be to refrain entirely from conveying the Program. 13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such. 14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

## 2.2 GNU Free Documentation License

Version 1.3, 3 November 2008

Copyright © 2000, 2001, 2002, 2007, 2008 Free Software Foundation, Inc. <http://fsf.org/>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed. 0. PREAMBLE

The purpose of this License is to make a manual, textbook, or other functional and useful document "free" in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondly, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of "copyleft", which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

### 1. APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, unlimited in duration, to use that work under the conditions stated herein. The "Document", below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as "you". You accept the license if you copy, modify, or redistribute it as "you". You accept the license if you copy, modify, or redistribute the work in a way requiring permission under copyright law.

A "Modified Version" of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A "Secondary Section" is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document's overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The "Invariant Sections" are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The "Cover Texts" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.

A "Transparent" copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format that is not Transparent if used for any substantial amount of text is a copy that is not "Transparent" is called "Opaque".

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The "Title Page" means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, "Title Page" means the text near the most prominent appearance of the work's title, preceding the beginning of the body of the text.

The "publisher" means any person or entity that distributes copies of the Document to the public.

A section "Entitled XYZ" means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version. 15. Disclaimer of Warranty.

**THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.** 16. Limitation of Liability.

**IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.** 17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

**END OF TERMS AND CONDITIONS How to Apply These Terms to Your New Programs**

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively state the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>

Copyright (C) <year> <name of author>

This program is free software: you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program. If not, see <http://www.gnu.org/licenses/>.

Also add information on how to contact you by electronic and paper mail.

If the program does terminal interaction, make it output a short notice like this when it starts in an interactive mode:

<program> Copyright (C) <year> <name of author> This program comes with ABSOLUTELY NO WARRANTY; for details type `show w'. This is free software, and you are welcome to redistribute it under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, your program's commands might be different; for a GUI interface, you would use an "about box".

You should also get your employer (if you work as a programmer) or school, if any, to sign a "copyright disclaimer" for the program, if necessary. For more information on this, and how to apply and follow the GNU GPL, see <http://www.gnu.org/licenses/>.

The GNU General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. This is what you want to do, use the GNU Lesser General Public License instead of this License. But first, please read <http://www.gnu.org/philosophy/why-not-lGPL.html>.

Title (section 1) will typically require changing the actual title. 9. TERMINATION

You may not copy, modify, sublicense, or distribute the Document except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, or distribute it is void, and will automatically terminate your rights under this License.

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license; and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, receipt of a copy of some or all of the same material does not give you any rights to use it. 10. FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See <http://www.gnu.org/copyleft/>.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License "or any later version" applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation. If the Document specifies that a proxy can decide which future versions of this License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Document.

11. RELICENSING

"Massive Multiauthor Collaboration Site" (or "MMC Site") means any World Wide Web server that publishes copyrighted works and also provides prominent facilities for anybody to edit those works. A public wiki that anybody can edit is an example of such a server. A "Massive Multiauthor Collaboration" (or "MMC") contained in the site means any set of copyrighted works thus published on the MMC site.

"CC-BY-SA" means the Creative Commons Attribution-Share Alike 3.0 license published by Creative Commons Corporation, a not-for-profit corporation with a principal place of business in San Francisco, California, as well as future copyleft versions of that license published by that same organization.

"Incorporate" means to publish or republish a Document, in whole or in part, as part of another Document.

An MMC is "eligible for relicensing" if it is licensed under this License and if all works that were first published under this License somewhere other than that MMC, and subsequently incorporated in whole or in part into the MMC, (1) had no cover texts or invariant sections, and (2) were thus incorporated prior to November 1, 2008.

The operator of an MMC Site may republish an MMC contained in the site under CC-BY-SA on the same site at any time before August 1, 2009, provided the MMC is eligible for relicensing. ADDENDUM: How to use this License for your documents

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

Copyright (C) YEAR YOUR NAME. Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.3 or any later version published by the Free Software Foundation; with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts. A copy of the license is included in the section entitled "GNU Free Documentation License".

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the "with ... Texts." line with this:

with the Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST.

If you have Invariant Sections without Cover Texts, or some other combination of the three, merge those two alternatives to suit the situation.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled "Acknowledgements", "Dedication", or "History", the requirement (section 4) to Preserve its

## 2.3 GNU Lesser General Public License

GNU LESSER GENERAL PUBLIC LICENSE

Version 3, 29 June 2007

Copyright © 2007 Free Software Foundation, Inc. <<http://fsf.org/>>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

This version of the GNU Lesser General Public License incorporates the terms and conditions of version 3 of the GNU General Public License, supplemented by the additional permissions listed below. 0. Additional Definitions.

As used herein, "this License" refers to version 3 of the GNU Lesser General Public License, and the "GNU GPL" refers to version 3 of the GNU General Public License.

"The Library" refers to a covered work governed by this License, either than an Application or a Combined Work as defined below.

An "Application" is any work that makes use of an interface provided by the Library, but which is not otherwise based on the Library. Defining a subclass of a class defined by the Library is deemed a mode of using an interface provided by the Library.

A "Combined Work" is a work produced by combining or linking an Application with the Library. The particular version of the Library with which the Combined Work was made is also called the "Linked Version".

The "Minimal Corresponding Source" for a Combined Work means the Corresponding Source for the Combined Work, excluding any source code for portions of the Combined Work that, considered in isolation, are based on the Application, and not on the Linked Version.

The "Corresponding Application Code" for a Combined Work means the object code and/or source code for the Application, including any data and utility programs needed for reproducing the Combined Work from the Application, but excluding the System Libraries of the Combined Work. 1. Exception to Section 3 of the GNU GPL.

You may convey a covered work under sections 3 and 4 of this License without being bound by section 3 of the GNU GPL. 2. Conveying Modified Versions.

If you modify a copy of the Library, and, in your modifications, a facility refers to a function or data to be supplied by an Application that uses the facility (other than as an argument passed when the facility is invoked), then you may convey a copy of the modified version:

\* a) under this License, provided that you make a good faith effort to ensure that, in the event an Application does not supply the function or data, the facility still operates, and performs whatever part of its purpose remains meaningful, or \* b) under the GNU GPL, with none of the additional permissions of this License applicable to that copy.

### 3. Object Code Incorporating Material from Library Header Files.

The object code form of an Application may incorporate material from a header file that is part of the Library. You may convey such object code under terms of your choice, provided that, if the incorporated material is not limited to numerical parameters, data structure layouts and accessors, or small macros, inline functions and templates (ten or fewer lines in length), you do both of the following:

\* a) Give prominent notice with each copy of the object code that the Library is used in it and that the Library and its use are covered by this License. \* b) Accompany the object code with a copy of the GNU GPL and this license document.

### 4. Combined Works.

You may convey a Combined Work under terms of your choice that, taken together, effectively do not restrict modification of the portions of the Library contained in the Combined Work and reverse engineering for debugging such modifications, if you also do each of the following:

\* a) Give prominent notice with each copy of the Combined Work that the Library is used in it and that the Library and its use are covered by this License. \* b) Accompany the Combined Work with a copy of the GNU GPL and this license document. \* c) For a Combined Work that displays copyright notices during execution, include the copyright notice for the Library among these notices, as well as a reference directing the user to the copies of the GNU GPL and this license document. \* d) Do one of the following: o 0) Convey the Minimal Corresponding Source under the terms of this License, and the Corresponding Application Code in a form suitable for, and under terms that permit, the user to recombine or relink the Application with a modified version of the Linked Version to produce a modified Combined Work, in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source. o 1) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (a) uses at run time a copy of the Library already present on the user's computer system, and (b) will operate properly with a modified version of the Library that is interface-compatible with the Linked Version. \* e) Provide Installation Information, but only if you would otherwise be required to provide such information under section 6 of the GNU GPL, and only to the extent that such information is necessary to install and execute a modified version of the Combined Work produced by recombining or relinking the Application with a modified version of the Linked Version. (If you use option 4d, the Installation Information must accompany the Minimal Corresponding Source and Corresponding Application Code. If you use option 4d, you must provide the Installation Information in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.)

### 5. Combined Libraries.

You may place library facilities that are a work based on the Library side by side in a single library together with other library facilities that are not Applications and are not covered by this License, and convey such a combined library under terms of your choice, if you do both of the following:

\* a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities, conveyed under the terms of this License. \* b) Give prominent notice with the combined library that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

### 6. Revised Versions of the GNU Lesser General Public License.

The Free Software Foundation may publish revised and/or new versions of the GNU Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library as you received it specifies that a certain numbered version of the GNU Lesser General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that published version or of any later version published by the Free Software Foundation. If the Library as you received it does not specify a version number of the GNU Lesser General Public License, you may choose any version of the GNU Lesser General Public License ever published by the Free Software Foundation.

If the Library as you received it specifies that a proxy can decide whether future versions of the GNU Lesser General Public License shall apply, that proxy's public statement of acceptance of any version is permanent authorization for you to choose that version for the Library.
